 Portfolio

PROFILE

Aspiring Data Scientist with hands-on experience in data analysis, machine learning, and natural language processing. Strong in statistical thinking and data-driven decision making, focused on solving real-world business problems.

EDUCATION

Data Science Trainee, TIPSG - RNS Group of Companies

Bachelor of Computer Applications (Manipal University Jaipur)

Shiv Shakti School , Jaipur (12th)

EXPERIENCE

Data Science & AI Intern

RNS IT Solutions & Vaani AI  | March 2026 – June 2026

- Worked on Data Science, Machine Learning, Deep Learning, and Generative AI projects using real-world datasets.
- Developed AI-powered chatbots and LLM-based applications using prompt engineering, NLP, and Transformer models.
- Assisted in building Retrieval-Augmented Generation (RAG) systems for intelligent document retrieval and question answering.
- Performed data preprocessing, exploratory data analysis (EDA), predictive modeling, and model evaluation.
- Created interactive dashboards and business intelligence reports using Python, SQL, and Power BI.
- Collaborated with development teams to design and deploy scalable AI solutions for real-world business use cases.

Technologies: Python, SQL, Machine Learning, Deep Learning, NLP, Transformers, LLMs, RAG, Generative AI, Power BI, Pandas, NumPy, Scikit-learn, Git/GitHub.

SKILLS

- | | | |
|----------------------|----------------------------|-----------------------------|
| • Python | • Numpy , Pandas | • Data Visualization |
| • SQL | • Statistics , Probability | • Machine Learning |
| • Power BI , Excel | • NLP , Web Scraping | • Regular Expression(Regex) |
| • Deep Learning | • Transformers | • Hugging Face |
| • Prompt Engineering | • RAG | • LLM |
| • Generative Ai | • Scikit-Learn | • Git/Github |

PROJECTS

Car Price Prediction

- Developed a machine learning-based used car price prediction system using key vehicle attributes.
- Performed data preprocessing, feature engineering, and model evaluation, and deployed the solution.

Laptop Price Prediction & Recommendation System

- Designed a laptop price prediction model using Python and machine learning techniques, with complete workflow from data analysis to deployment for real-time user interaction.

Hotel Booking Cancellation Analysis

- Performed data cleaning, EDA, and insight analysis to identify key factors driving hotel booking cancellations and support data-driven decisions.

Movie Recommendation System

- Developed a web application for movie data analysis using Python and Pandas, including data cleaning, handling parsing and encoding errors, and applying groupby and aggregation techniques to generate insights.

Language Detection

- Built an NLP-based model to classify text into different languages
- Applied preprocessing and machine learning techniques for accurate prediction
- Tools: Python, scikit-learn, NLP

Chat Bot (Kimi Model)

- Built a chatbot that processes both text and images to generate intelligent responses
- Implemented image analysis and NLP for context-aware interaction
- Technologies: Python, Computer Vision, NLP, Multimodal AI

Real Time Face Detection

- Built a real-time face detection application leveraging OpenCV and computer vision techniques to detect and locate faces in live camera feeds efficiently.

Loan Approval System

- Built a loan approval prediction system using Machine Learning models (Logistic Regression, decision tree, and Random Forest) to classify loan applications based on applicant data.
- Developed a Streamlit web app for real-time predictions with data preprocessing, feature engineering, and model evaluation.

Stock Market Forecasting

- Built an AI-powered Stock Market Forecasting application using LSTM Deep Learning to predict future stock prices based on historical market trends.
- Implemented data cleaning, feature engineering, time-series analysis, and interactive visualizations using Python, TensorFlow, and Streamlit.

Face_Attendance_System

- Developed an AI-based Face Recognition Attendance System using Python, OpenCV, and Face Recognition libraries.
- The system detects and recognizes faces in real-time through a webcam, automatically marks attendance with date and timestamp, and provides voice-based authentication success/failure alerts for secure access management.

CERTIFICATES

- Deloitte (Data Analytics)
- Google (Data Analytics)
- HackerRank-Python (Basic), SQL (Basic, Intermediate, Advanced)
- IBM(Generative AI: Prompt Engineering Basics)
- IBM(Introduction to Deep Learning & Neural Networks with Keras)
- IBM (Artificial Intelligence)
- IBM (Machine Learning)
- British Airways (Data Science)
- IBM(Generative AI and LLMs: Architecture and Data Preparation)
